

NAT & Firewall

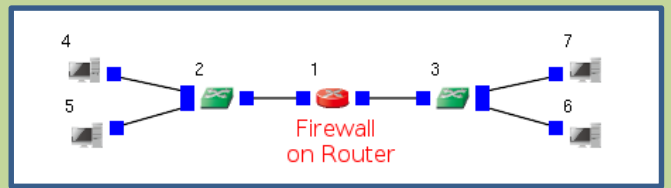

Virtual Router with NAT

- The Linux Netfilter framework is used to enable NAT
- The NAT is applicable on any router
- The blue NAT router serves basic address and port translation
- Enable advanced functions by editing the configuration file

Virtual Router with Firewall

- The Linux Netfilter framework is used to enable Firewall
- The Firewall is applicable on any router or any node with a layer-3 network interface
- Edit the configuration file to define Firewall policies

EstiNet Simulation Platform on Fedora Linux
